

How are the scores calculated?

Using the 40th percentile calculation, only the top 40% of a field influence the points allocated. It doesn't matter whether your individual race is faster or slower, what matters is where you measure up to the first 40% of the field. The faster the top 40%, the better your score will be. The table below explains X as the 40th Percentile finisher. Male and Female rankings are calculated separately.

Competitor	Finishing Time (Minutes)	Points
A	60	100 X (90/60) = 150 points
B	80	100 X (90/80) = 113 points
X	90	100 x (90/90) = 100 points
G	120	100 x (90/120) = 75 points

With the above system, the winner gets proportionally more points to reflect how much time they have won by, and if the first and second competitors are close in time, they will get almost the same number of points to reflect an almost equal performance.

Participants need to be aware that you can be a winner of a race(s) listed in the series events, but that does not guarantee that you will be the overall or age group winner. This is due to the calculation being based on how your performance measures up to the first 40% of the field, and that your best four of results may be in different events to your competitors.

Still Confused? Don't Be.

Adult ranking winners are those who score the highest number of points over four of the six events.

The rankings are then based on the maximum number of points scored by each individual, so if participant A only completes four events and scores 420 points and competitor B completes six events but his best four scores accumulate to 415 points, participant A will finish ahead of participant B in the placings. You must complete four events to feature in the overall series.

So technically, you can win a number of races, but if the rest of the top 40% of the field are slower, someone who wins a lower amount of races but does well in competitive fields can be ranked higher. This will keep the series alive to the final race.

Club Points

The maximum points you can win for your club at an event is twenty, and the minimum is one. To calculate the exact points, in each race, your finishing place within your age group is counted and considered along with the total number of participants within that age group. Points will be awarded based on the 40th percentile of eligible participants within each age group (or as close as possible).

This means points will be awarded for a maximum of 20 in each age group, then down by the points difference for that age group. Every finisher will score a minimum of one point for their club, therefore the more events you enter, the more points your club earns.

Example as follows:

Age Group	Total Participants	Club Members	Points Difference
Male Seniors	100	40	0.5 per space
Female Seniors	60	24	0.8 per space
Male Vets 40	60	17	1.1 per space
Female Vets 40	10	4	5 per space

*Points will be differentiated by the 'points difference value' (20 points / number of members). Any individual receiving a total of less than one point will be rounded up to one.

Clubs will be split into two categories, those with over 120 members, and those under.
